Lacquered coating <i>Laccatura</i>	Painting takes place through the use of polyurethane paints. They do not contain heavy metals (Pb, Cd, Cr), as required by current legislation (EN 71/3). Polyamide microspheres 30 µm in diameter. They give the product scratch resistance and pleasantness to the touch (classe CARBP2/TSCA Title VI).	La verniciatura avviene tramite l'utilizzo di vernici poliuretatiche. Non contengono metalli pesanti (Pb, Cd, Cr), come prescritto dalla normativa vigente (EN 71/3). Microsfere di poliammide µm 30 di diametro. Conferiscono al prodotto resistenza al graffio e piacevolezza al tatto (classe CARBP2/TSCA Title VI).
Metal & glass <i>Vetro & metallo</i>	Natural finish or painted with epoxy powders of various colours.	In finitura naturale o verniciato a polveri epossidiche di vari colori.
MDF	Panel composed of wood fibers pressed with glues and resins at high temperatures; density between 500 and 800 kg/m³.	Pannello composto in fibre di legno pressato con colle e resine ad alte temperature; densità tra i 500 e gli 800 kg/mc.
Materic melamine <i>Melaminico materico</i>	Bi melamine with wood pore register finish or sample design. Chipboard panel support made of wood particles with low formaldehyde content (CARBP2/TSCA Title VI class).	Bi melaminico con finitura legno poro registro o disegno campione. Supporto in pannello di truciolare a basso contenuto di formaldeide (classe CARBP2/TSCA Title VI).
Wood veneers <i>Essenze legno</i>	Natural wood veneer of various thicknesses (solid wood or veneer). Treated with solvents to give different finishes and color ranges. Sense of vein according to the product.	Tranciato di legno naturale di vari spessori (massello o impiallacciatura). Trattato con solventi per conferire diverse finiture e gamme colore. Senso di vena in base al prodotto.
Marbles & Laminam® <i>Marmi & Laminam®</i>	Marble is a limestone rock, generated through the crystallization process. Crystals and granules whose dimensions are between 0.2 and 5 mm. Laminam® is a 100% Italian-made, large-size, minimum-thickness anti-cutting ceramic slab.	Il marmo è una roccia calcarea, generata attraverso il processo di cristallizzazione. Cristalli e granuli le cui dimensioni sono comprese tra 0,2 e 5 mm. Laminam® è una lastra ceramica antitaglio di grandi dimensioni e minimo spessore, realizzata al 100% in Italia.
HPL	Self-supporting material made up of layers of kraft paper impregnated with thermosetting resins and one or more surface layers of decorative paper impregnated with aminoplastic resins, pressed at 9 MPa and 150 °C. Available in solid (1,2 cm) or laminate version.	Materiale autoportante costituito da strati di carta kraft impregnata con resine termoindurenti e da uno o più strati superficiali di carta decorativa impregnata con resine aminoplastiche, pressati a 9 MPa e a 150°. Presenti in versione stratificata (1,2 cm) o laminata.
Fenix NTM®	Anti-scratch and anti-fingerprint laminate, produced through high-pressure thermo-lamination for durability and stability. Its surface is treated with advanced acrylic resins, hardened and fixed using the Electron Beam Curing (EBC) process. The result is a smooth, glossy finish with excellent resistance to daily wear and tear, ideal for applications requiring both aesthetics and long-lasting performance.	Laminato antigraffio e anti-impronte, prodotto mediante termo-laminazione ad alta pressione per garantire durabilità e stabilità. La superficie è trattata con resine acriliche avanzate, indurite e fissate tramite il processo di Electron Beam Curing (EBC). Il risultato è una finitura liscia e lucida, con eccellente resistenza all'usura quotidiana, ideale per applicazioni che richiedono sia estetica sia lunga durata.
Polypropylene <i>Polipropilene</i>	Polypropylene (PP) is a highly versatile, high-quality polymeric plastic that requires precise processing. Its main characteristics include excellent strength, high-temperature stability, elasticity, impact resistance, light weight, and low density. PP is also an eco-friendly material: non-toxic and safe, it does not release harmful substances during or after use. Its high energy content allows for efficient thermal recycling.	Plastica polimerica (PP) estremamente versatile e di alta qualità, che richiede processi di lavorazione precisi. Tra le sue caratteristiche principali figurano eccellente resistenza, stabilità alle alte temperature, elasticità, resistenza agli urti, leggerezza e bassa densità. Il PP è inoltre un materiale ecocompatibile: atossico e sicuro, non rilascia sostanze nocive durante o dopo l'uso.

ABS

ABS (acrylonitrile-butadiene-styrene) is a synthetic thermoplastic resin characterized by excellent acid resistance, a dust-repellent surface, and good dimensional stability, without easily deforming. Thanks to these properties, ABS is used for the production of edges and panels for surface coverings.

L'ABS (acrilonitrile-butadiene-stirene) è una resina termoplastica sintetica caratterizzata da ottima resistenza agli acidi, superficie che non attrae la polvere e buona stabilità dimensionale, senza deformarsi facilmente. Grazie a queste proprietà, l'ABS viene utilizzato per la produzione di bordi e pannelli destinati al rivestimento delle superfici.

Aluminum

Alluminio

Aluminum is a ductile, silver-colored metal that is lightweight, resistant to oxidation, and hard enough to be used in structures that are both strong and light. It is processed industrially through casting, forging, or stamping.

Metallo duttile di colore argento, l'alluminio è leggero, resistente all'ossidazione e sufficientemente duro da permetterne l'uso in strutture solide ma leggere. Viene lavorato industrialmente tramite fusione, forgiatura o stampaggio.

Stainless steel

Acciaio

Stainless steel is a strong, corrosion-resistant alloy with a silvery appearance. It combines hardness and durability with resistance to rust and staining, making it ideal for structural components and surfaces exposed to wear or moisture. Stainless steel is manufactured through processes such as casting, forging, rolling, and extrusion.

L'acciaio inox è una lega resistente e anticorrosione dal colore argenteo. Unisce durezza e durabilità alla resistenza alla ruggine e alle macchie, rendendolo ideale per componenti strutturali e superfici soggette a usura o umidità. L'acciaio inox viene prodotto tramite processi come fusione, forgiatura, laminazione ed estrusione.

Other materials

Altri materiali

Massimiliano Strati® production also employs a wide range of additional materials not included in the sample collection, such as special lacquered finishes, laminates, and steel for kitchen tops, sinks, and handles.

La produzione Massimiliano Strati® utilizza anche una vasta gamma di materiali aggiuntivi non presenti nella collezione campioni, come finiture laccate speciali, laminati e acciaio per piani cucina, lavelli e maniglie.

Customization

Personalizzazione

We offer a comprehensive selection of lacquered colors, wood veneers, stones, marbles & Laminate HPL - the last one only for countertops - all of which can be fully customized to meet the unique preferences and requirements of our clients.

Offriamo una selezione interamente personalizzabile di colori laccati, essenze legno, marmi e laminati HPL, tutti completamente personalizzabili per soddisfare le preferenze e le esigenze dei nostri clienti.

Made in Italy

Our commitment to quality is evident in every product, meticulously designed and crafted in Italy. With 100% Italian manufacturing, we ensure exceptional craftsmanship, durability, and precision, reflecting the excellence and tradition that Italian-made goods are renowned for worldwide.

Il nostro impegno si traduce nella qualità dei prodotti, tutti realizzati con cura in Italia. Una produzione completamente 100% made in Italy garantisce non solo eccellenza e precisione, ma valorizza appieno la tradizione e l'artigianalità italiana in ogni dettaglio.
